

1 Review: Subtract from 10

Quick review: subtract from 10.

$10 - 4 = \underline{\hspace{2cm}}$

$10 - 7 = \underline{\hspace{2cm}}$

$10 - 2 = \underline{\hspace{2cm}}$

$10 - 5 = \underline{\hspace{2cm}}$

$10 - 8 = \underline{\hspace{2cm}}$

$10 - 3 = \underline{\hspace{2cm}}$

2 Strategy: Make 10 First

Subtracting from Numbers 11-20

Strategy: Make 10 first!

13 - 5: Think "13 - 3 = 10, then 10 - 2 = 8"

3 Practice Problems

Use any strategy you like.

$13 - 5 = \underline{\hspace{2cm}}$

$14 - 6 = \underline{\hspace{2cm}}$

$12 - 4 = \underline{\hspace{2cm}}$

$15 - 7 = \underline{\hspace{2cm}}$

$11 - 3 = \underline{\hspace{2cm}}$

$16 - 8 = \underline{\hspace{2cm}}$

4 Show Two Different Ways

Show Two Different Ways

15 - 7

Way 1 (make 10): 15 - $\underline{\hspace{2cm}}$ = 10, 10 - $\underline{\hspace{2cm}}$ = $\underline{\hspace{2cm}}$

Way 2 (addition): 7 + $\underline{\hspace{2cm}}$ = 15, so 15 - 7 = $\underline{\hspace{2cm}}$

17 - 9

Way 1 (make 10): 17 - $\underline{\hspace{2cm}}$ = 10, 10 - $\underline{\hspace{2cm}}$ = $\underline{\hspace{2cm}}$

Way 2 (addition): 9 + $\underline{\hspace{2cm}}$ = 17, so 17 - 9 = $\underline{\hspace{2cm}}$

5 Challenge: Explain Your Thinking

Explain Your Thinking

How would you solve 16 - 8? Write or draw your strategy.
